

MLT-02 Machine Learning-II

This session walks you through two important machine learning algorithms:

- Support Vector Machine (SVM) which falls under the realm of supervised learning
- K-Means Clustering which falls under the field of unsupervised learning

Participants will get an understanding of how these algorithms work.

Key Takeaways:

- Support Vector Machine (SVM)
 - Hyperplane
 - Kernels
 - Margins
- K-Means Clustering
 - Similarity Measure
 - Clustering Approaches

Pre-requisites:

- Go through the free course on Machine learning: [Click here](#)
- Understanding of the MLT-01 lecture

Recommendations:

Below are reference books for reading:

- [Introduction to Support Vector Machines](#)
- [K-Means Clustering Algorithm For Pair Selection In Python](#)
