

MLT-03 Machine Learning-III

Participants will be introduced to the world of Neural Networks in this lecture. They will get an understanding of what, why and how of them. Additionally, this session will also touch upon text mining and its applications in financial trading.

Students will be able to comprehend how neural networks are different from classical machine learning algorithms and what it encompasses.

Key Takeaways:

- Neural networks
 - Neurons
 - Architecture
 - Hidden Layers
 - Activation Functions
 - Gradient Descent
 - Backpropagation Algorithms
 - TD-IDF

Pre-reading/Pre-lecture tasks:

- Go through the previous lectures of Machine Learning I & II

Recommended Reading:

- [Introduction To Deep Learning And Neural Network](#)
- [Neural Network In Python: Introduction, Structure And Trading Strategies](#)
- [Forward Propagation In Neural Networks: Components and Applications](#)
