

IB Python API Lecture: Pre-requisites & Installation Guide

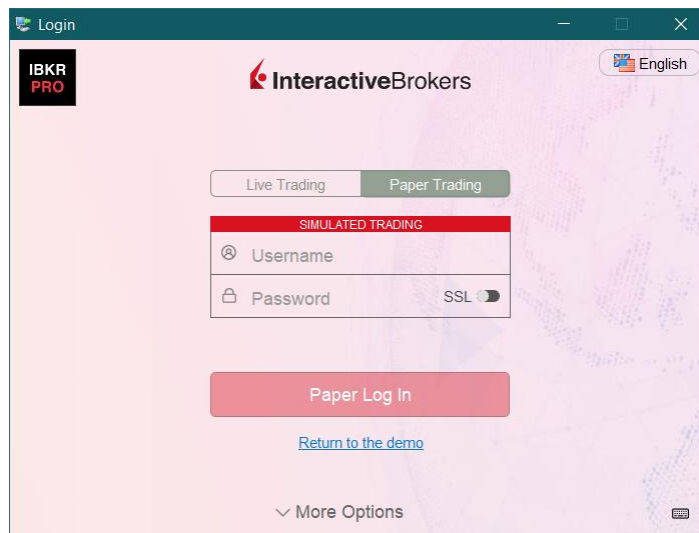

Document created by: Jay Parmar

Last updated on: 20th September 2021

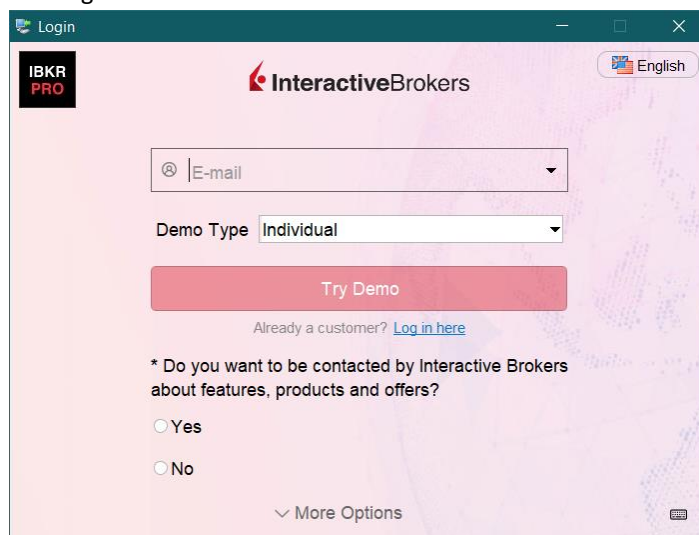

This document specifies the pre-requisite necessary for attending the IB Python API lecture. We recommend you complete these essential requirements before attending the class. To be on the same page during the lecture, we will NOT demonstrate any of the steps listed below during the lecture. Following are the pre-requisites:

- Python 3.3 or higher is required.
- IB Python API Installation:
 - Download the latest version of IB API (version 10.10 at the time of writing this document). Please follow the following steps to install it:
 - For Windows systems
 - Download the specified version from [this link](#)
 - Install the API using the downloaded .msi file
 - Run the Anaconda prompt and navigate to the pythonclient directory under the source directory using the following command
 - `cd "C:\TWS API\source\pythonclient"`
 - Run the following command
 - `python setup.py install`
 - Restart Spyder
 - For Mac/Unix systems
 - Download the specified version from [this link](#)
 - Open Terminal (Ctrl+Alt+T on most distributions)
 - Navigate to the directory where the installer has been downloaded
 - `cd ~/Downloads`
 - Unzip the contents of the installer into your home folder with the following command (if prompted, enter your password)
 - `unzip twsapi_macunix.n.m.zip -d $HOME/`
 - To access the sample and source files, navigate to the IBJts directory and confirm the subfolders samples and source are present
 - `cd ~/IBJts`
 - Open the Anaconda prompt and navigate to the pythonclient directory under the source directory
 - `cd ~/IBJts/source/pythonclient`
 - Run the following command
 - `python setup.py install`
 - Restart Spyder
- IB TWS Installation:
 - Download the TWS trading terminal from [this link](#). For IB TWS, version 952.x or higher is required.

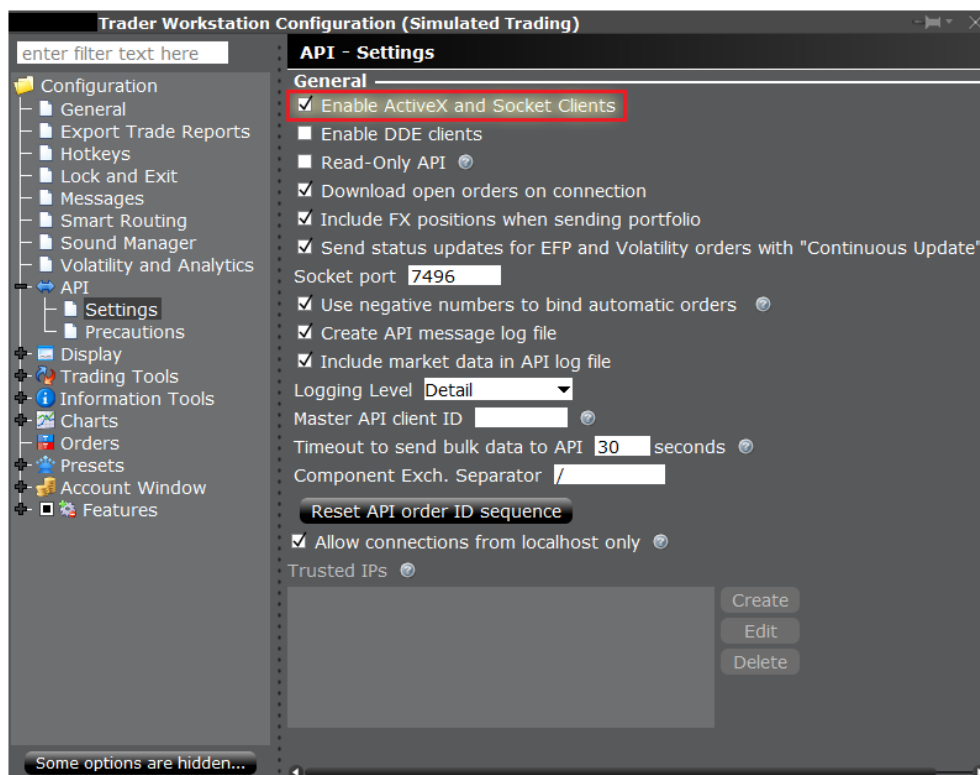

- Configuration of IB TWS:
 - Open IB TWS and login
 - If you don't have an account with Interactive Brokers, you can log into the demo account

- Click on the “Return to the demo” link as shown in the snapshot above. It will open a new login window as shown below

- Enter your email address and click on “Try Demo”
- Once you are logged in, go to the following path and enable the said option
 - Go to Edit → Global Configuration → API → Settings → Activate ‘Enable ActiveX and Socket Clients’ option

- Set the socket port to 7496 and uncheck “Read-Only API” as shown in the snapshot above
- That’s it. You are ready with your setup. For more info, please refer to [this link](#). See you in the class.
