

Executive Programme in Algorithmic Trading (EPAT®) Orientation Session

Ajit Chandani

Puja Narvekar

Agenda

- Content: Programme Objectives, Curriculum and Lecture Details
- Journey: Next 7 months, what lies ahead?
- People: Faculty, Support Team, Career Cell, and Alumni Cell
- LMS Demo: Best Practices on Using Learning Management System (LMS)

Objectives

- Get familiarized with the world of quantitative & algorithmic trading
- Get exposed to various strategy paradigms in quantitative and algorithmic trading
- Learn the tools & skills required to create and implement these strategies
- Know about networking and hardware aspect of algorithmic trading, regulations & business environment for algorithmic trading
- Network Building and Career Progression to Algorithmic Trading Industry

Core Modules

SFM-01: Introduction to Excel

Objectives: Use Excel for quantitative calculations, Systematically formulate trading strategies on Excel, Perform mathematical functions such as sum, sum-if, lookup/search function (such as offset, index, match), and formatting.

SFM-02: Basic Statistics

Objectives: Statistics & Probability terms, Regression, Random Walk Model, Modern Portfolio Theory

SFM-03: Practical session Basic Statistics using Excel

Objectives: Analyse low-medium frequency data in excel, Back-test low/medium frequency trading strategy

EPAT- Market Microstructure For Trading

MMT-01: Execution Strategy I

Objectives: Market terminology, Order book, Asynchronous time, Pegging & Discretion. End to end understanding of an Algo trading strategy

MMT-02: Execution Strategy II

Objectives: VWAP, Best execution price, Execution strategies

MMT-03: Overview of Electronic and Algorithmic Trading

Objectives: Execution strategy to trade large volumes

MMT-04: The Algorithmic Trading Process

Objectives: The algorithmic trading process from a market microstructure perspective.

EPAT- Python Basics & its Quant System

PBQ-01: Basics of Python programming

Objectives: Basic programming session for getting started with Python.

PBQ-02: Python Basics for Quants

Objectives: Libraries/Packages in Python, The NumPy Library, The pandas Library, Some commonly done calculations in quantitative trading

Doubt Solving Sessions: Two additional (optional) sessions to clear doubts and answer questions that you may have on python content for the above two lectures

EPAT- Equities, FX & Futures Strategies

EFS-01: Strategy Building In Equities

Objectives: Optimizing trading strategy, understanding equity derivatives market

EFS-02: Statistical Arbitrage and Pair trading

Objectives: Identification of probable pairs, Entry-Exit, Back testing, co-integration methodology

EFS-03 & 04: Quantitative Momentum Strategies

Objectives: Hands-on modelling exercise for back testing momentum/trend-following strategies with MATLAB. This module includes access to MATLAB primer.

EFS-05: Trading ETFs

Objectives: Conceptual understanding of ETFs, primary creation process and asset allocation

EPAT- Data Analysis & Modeling in Python

DMP-01: Strategy backtesting using Python

Objectives: Architecture, back-testing, build customized trading indicators, basic Python coding continued from PBQ module

Doubt Solving Sessions: One additional (optional) sessions to clear doubts and answer questions that you may have on python content after DMP-01

DMP-02: Introduction to Object Oriented Programming

Objectives: Programming layout of various packages, Usage of classes over procedural Programming

DMP-03: Object Oriented Programming In Python

Objectives: Learn about object oriented programming, Understand programming layout of various packages; Appreciate usage of classes over procedural programming

DMP-04: Event driven backtesting and working with live data stream

Objectives: Event driven backtesting and working with live data stream, Optimizing trade parameters

DMP-05: QuantiPy

Objectives: Summarizing the objectives of the past sessions on python, Quant strategy workflow

EPAT- Machine Learning for Trading

MLT-01, 02 & 03: Machine Learning

Objectives: Feature selection, Decision trees, Support vector machines, Neural networks, Forward propagation, Backward propagation, Various neural network architectures

MLT-04: How to Develop a Trading Strategy using Machine Learning

Objectives: Using Python and Jupyter notebooks to create features, evaluate models, use feature selection and test raw performance

MLT-05: Statistical Arbitrage with PCA

Objectives: Alpha factors recap, Cointegration deep dive, Statistical arbitrage strategies for large portfolios

MLT-06: Natural Language Processing and Sentiment Analysis in Trading

Objectives: Alternative Data, Content & Tools(Off-the-Shelf), Text Pre-processing, Machine Readable News

MLT-07: Reinforcement Learning in Trading

Objectives: Basic ideas of deep reinforcement learning such as reward, explore/exploit, Bellman equation and memory replay, Challenges and problems with RL in trading, Implementation of RL in a simple strategy using "gamification"

PRM-01: Portfolio Management & Risk Management for Algorithmic Trading

Objectives: Risk Management in a trading firm Specific to algorithmic trading, Risk management failures in the field - Real world example

PRM- 02: Quantitative Portfolio Management

Objectives: Understand risk and returns terminology, Conceptualize the portfolio building process, Build a portfolio with multiple stocks, Profitability analysis of a portfolio and strategy

TIO-01: System Architecture

Objectives: Different components of a traditional vs. automated trading system, building a trading system

TIO-02: Tackling desk operations and regulatory environment

Objectives: Understanding the business environment (including regulatory environment, financials, etc.) for Algorithmic Trading desks. Understanding how Latency and networking, hardware and software innovations provide the Technology Edge for Trading

EPAT- Trading & Back-testing Platforms

TBP-01: IB Python API

Objectives: Strategy Life Cycle, Manual Trading using IB Trader Workstation (TWS), Understanding IB TWS API architecture, IB API Demo.

TBP-02: Rest API

Objectives: Understand how the REST API works, Know to work with web sockets in Python

TBP-03: Back-testing using Blueshift

Objectives: Develop and test your trading strategies with real market data on Blueshift platform

TBP-04 & 05 : Back-test and Live Trade Algo Strategies

Objectives: Components and steps to start an investment fund, Different Python solutions for algo trading, IBridgePy cornerstone functions, Improvements to moving average crossover strategy, Build a buy-low-sell-high strategy, Back-test strategies

EPAT- Advanced Statistics for Quant Strategies

ASQ-01: Statistical Analysis of Financial Market Data

Objectives: Time series analysis, Stationarity of time series, Autocorrelation function, Partial autocorrelation function

ASQ-01: Time Series Modeling with Python

Objectives: Difference between ARCH and GARCH, Combine ARIMA and GARCH models, linearity of volatility

EPAT- Options Trading & Strategies

OTS-01: General Trading Theory

Objectives: General option trading philosophy, Trading Principles: edge, variance, breadth, stops, History of derivatives,

OTS-02: Volatility Trading and Variance Premium

Objectives: Why options are appealing to trade, Realized volatility, Implied volatility, The volatility premium

OTS-03: Options Pricing Models, Volatility Measurement, and Forecasting

Objectives: Options basics and terminology, Model independent features of options: arbitrage relationship
Volatility measurement and forecastings between various options, and options and underlying, Risk-neutrality, Properties of BSM solution,

OTS-04: Structuring a Volatility Trade

Objectives: Selecting strikes and expirations, Hedging in practice, Volatility Trading, Covered calls, Equity options and earnings

OTS-05: Trade Evaluation

Objectives: Trade planning and evaluation, Risk measures, An example that summarizes the volatility trading process, Expiration trading, Risk measures

OTS-06: Creating an Options Backtesting Model: A systematic way to backtest options strategies, create a backtester class for naked options, add functions for complex options analysis, study mark-to-market returns, create a trade sheet from backtesting, analyze backtest performance.

EPAT- PROJECT (Optional)

- Quiz/Assignment of relevant project topics needs to be completed before starting the project
- Write your own working strategy starting from ideation, data analysis, strategy formulation, back testing and coding
- Mentorship under a trading expert/practitioner
- Successful project topics: Pair trading strategies, Dispersion Trading , Machine Learning
(<https://www.quantinsti.com/category/project-work-epat/>)
- Submission Requirements:
 1. Working Strategy Model
 2. Project Report 2000-5000 words long

EPAT- MID TERM & FINAL EXAM

Mid Term exam (10 % Weightage)

- MCQ-based test
- Topics covered during the first two months

Final Exam (90 % Weightage)

- QuantInsti brings to you the world's first verified algorithmic and quantitative trading certification course Executive Programme in Algorithmic Trading (EPAT) with proctored exams globally.
- Successfully passing the EPAT Final Examination is the minimal requirement to be eligible for Verified EPAT Certification of Excellence
- Participants have a choice to pick between the Online and In-center Proctor exam as per their preference.
- The EPAT Final Exam is divided into two sections:
 - I. Conceptual and Foundational (focuses on core concepts, theoretical understanding and foundational knowledge covered in the EPAT programme.)
 - II Quant Systems and Implementation (Focuses on quantitative trading systems, strategy logic and implementation aspects.)

* **Note:** For participants enrolled under **IBF - STS (Singapore)**, the exam format and course completion criteria are different.

Agenda

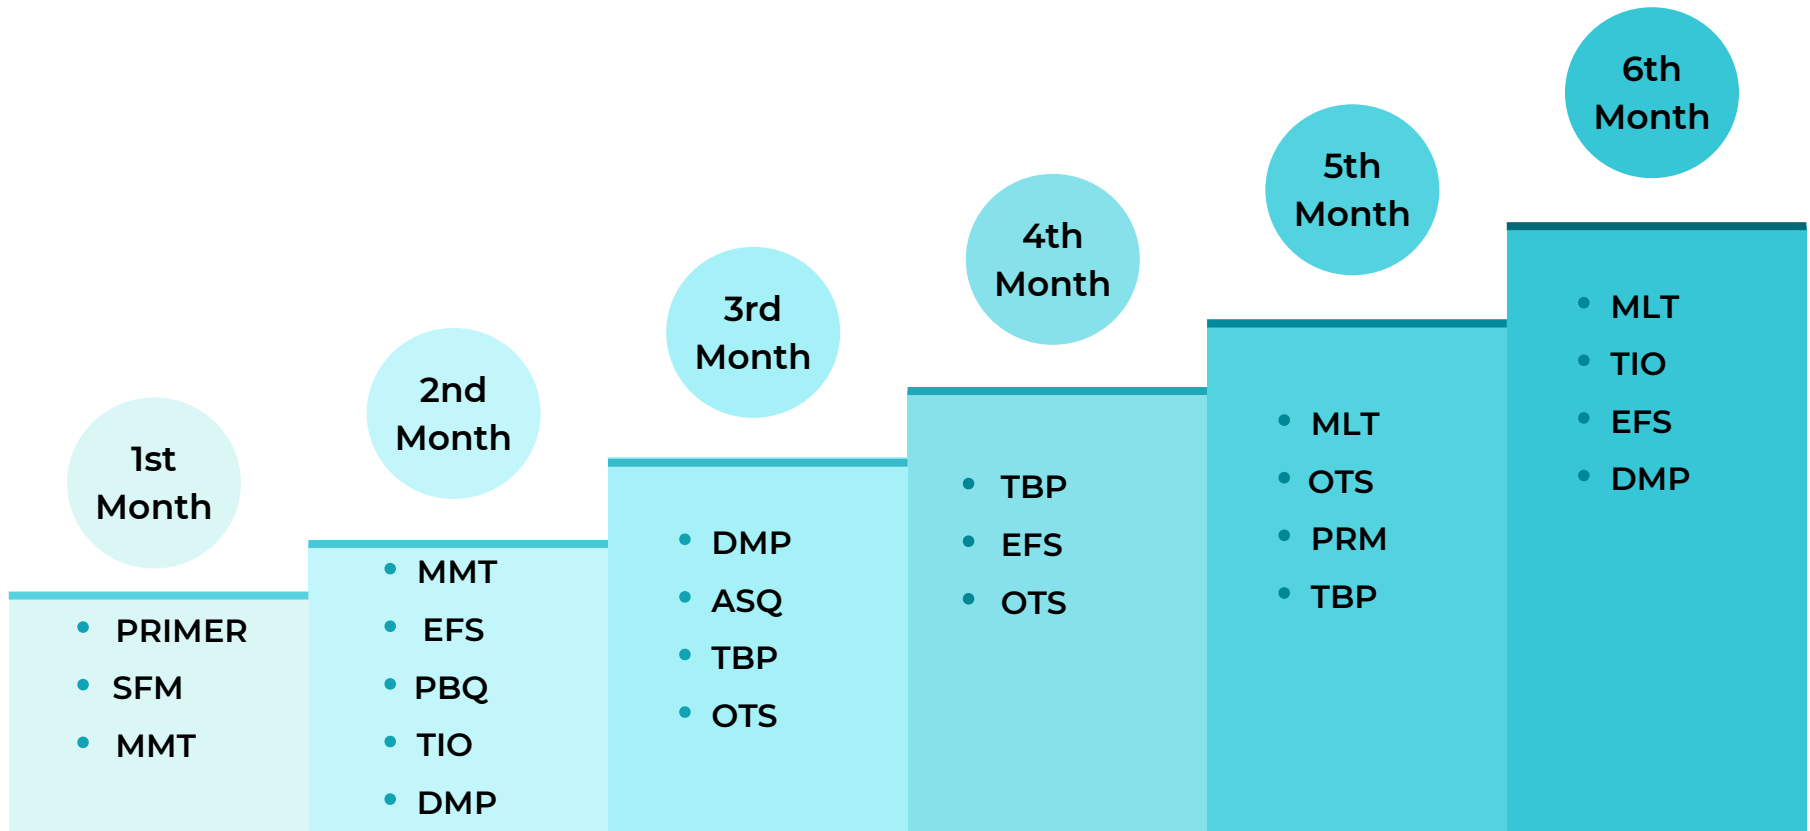

- ✓ Content: Programme Objectives, Curriculum and Lecture Details
- **Journey: Next 7 months, what lies ahead?**
- People: Faculty, Support Team, Career Cell, and Alumni Cell
- LMS Demo: Best Practices on Using Learning Management System (LMS)

In a Nutshell

Steps	Objective	Modules
Basics of Excel, Python, Stats, Financial Markets	Building a foundation	Primers, SFM, PBQ, initial session(s) of EFS, MMT & OTS each
Data Access	Learning the initial steps	SFM, PBQ & DMP
Data enhancement (cleaning, sanity, etc)	Building analytical bent of mind	SFM, DMP
Trading Hypothesis	Learning about various strategy paradigms	EFS, OTS, MLT
Strategy logic	Thinking like a quant	EFS, OTS, MLT & ASQ
Trading & Analysis tools	Things at your disposal	DMP, TBP
Strategy Modelling	Analysis & Modelling	EFS, OTS, MMT, MLT
Optimization	Analysis & Modelling	EFS, MLT
Position Sizing	Picking up the right size	EFS, PRM
Portfolio Management & Portfolio of Strategies	As it is not just the one	PRM, MLT
Back-testing	The right way to evaluate the strategies/models	DMP, TBP, EFS
Risk Management	Measuring the risk & performance metrics	PRM, EFS
Execution	The last mile!	TBP, MMT, DMP
Post Trade Performance evaluation	Learning from losses & leveraging the winners	OTS, TBP
Business Environment, Architecture & Processes	Setting up the big boy shop	TIO

Next 6 Months

- *To appear for the EPAT final exam, you can visit your nearby Prometric exam center, to earn “Verified EPAT Certification of Excellence”*
- *We will award the top performers in an online Convocation Ceremony.*

Lecture Schedule

- Saturdays & Sundays:
- Roughly 3 hours (Each Lecture)
- Combination of Practical + Theory Sessions
- **120+ hours (Overall Live Lectures)**

Self Study

- Most lectures have assignment/quiz
- Watch the lecture recording
- Submit the homework
- Test & assignments needs to be completed as per the dates mentioned under 'Due Dates for Tests & Assignments'
- 300+ hours

Ask Queries

- Use Messages on LMS (Learning Management System)
- Raise your doubts. Best way to learn is, to ask and answer!
- Send messages with specific queries

EPAT - Industry & Academia Exposure

Webinars/Seminars with/for leading industry bodies, financial, & educational institutions: Workshop On Algorithmic Trading For Kenanga Group – Kuala Lumpur, Malaysia; Nanyang Technological University, Singapore; Interactive Brokers; Stock Exchange of Thailand; Bursa Malaysia; Various IITs & IIMs in India; Zerodha; Upstox; SGX; NSE; Unicom London; Thomson Reuters; Goldman Sachs Asset Management and many more!

Guest Speakers from Academia, Industry have spoken on various topics:

- ✓ Build Your Quant Portfolio: First Steps into Algorithmic Trading
- ✓ Gen AI and Automated Trading Summit: Algo Trading on MT5 and Tradingview
 - ✓ MasterClass in High-Frequency Trading
- ✓ Trading in the Age of AI: How to Stay Ahead
- ✓ AI for Portfolio Management Webinar
- ✓ MasterClass on HFT, Algo Desk Setup & Career Growth in Quant Trading
- ✓ Trading Using LLM with Ernest Chan and Hamlet Medina
- ✓ Algorithmic Trading Conference 2024
- ✓ Common Mistakes Made by Traders
- ✓ Exploring Options Volatility: Key Properties, Trading Strategies & Backtesting
- ✓ Algorithmic Trading with Python: Integrating with Various Brokers and Platforms | Webinar
- ✓ Implementation of Machine Learning in Momentum Trading
- ✓ AI-Powered Trading Workshop 2024 | Navigating Opportunities and Challenges

Sessions

Kenanga Group - Kuala Lumpur, Malaysia

Nanyang Technological University, Singapore

NSE (MDP) Chennai, India

NUS Business School, National University Of Singapore

EPAT- Lifelong Learning & Benefits

We offer **lifelong learning** to participants post EPAT completion, which comprises of:

- Access to a network of faculty and alumni, who are practitioners and researchers in this field
- Reaching out to the industry members through our extensive online network
- Assistance in placements in the relevant roles and career development
- Invitation to guest lectures which include new technological innovations, training to work on new platforms, advancement in the relevant field
- Access to the Python based research, backtesting & trading platform for FX and Equities (US & India) – Blueshift

Access to **EPAT** content: 6 months (LMS) + Lifetime access (Alumni portal)

Alumni Cell email address: alumni.cell@quantinsti.com

Agenda

- ✓ Content: Programme Objectives, Curriculum and Lecture Details
- ✓ Journey: Next 7 months, what lies ahead?
- **People: Faculty, Support Team, Career Cell, and Alumni Cell**

How to define success in life?

What it means to be a successful Algo Trader?

Here are some achievements and [reviews](#) of our Alumni who are from various backgrounds, but have fulfilled their dreams to master Algorithmic Trading by successfully completing EPAT

Want to talk to successful EPATians?

Just follow us on Twitter @QuantInsti

Rohit Gupta, Singapore

Before EPAT
Hedgestone Capital

Currently
Director, Capital Partners

"I had zero experience in coding/quant and after the course, I am confident in writing trading strategies in R, Python, Matlab and also able to understand some Machine learning algorithms. Listening to the esteemed Faculties at QuantInsti® has definitely given me an edge in this industry. I have transformed from fundamental to a Quantimental trader."

Marco Dibo, Argentina

Before EPAT

Fixed income Trader, Becerra Bursatil S.A

Currently

**Head, Quantitative Trading Desk, Quanticko,
CEO at Quantex**

"I am very happy with the support provided by the administration team. Faculty is greatly committed at resolving queries. Having worked at one of the leading brokerage houses, I would certainly want to get into algorithmic trading and this is where QuantInsti®'s EPAT course will help me."

Jacques Joubert, UK

Before EPAT

Quantitative Trading, I-Sixty

Currently

**Quantitative Researcher & Developer,
ADIA, UAE**

"I spent a great deal of time looking for the CFA equivalent for algorithmic trading and EPAT is the closest match. I loved how the course covered a wide range of topics. When I started the course I had plans to go back to university to study math further but just before finishing the course I got hired by a coveted quantitative hedge fund as a quantitative analyst. A special thanks to the faculty."

Diverse Alumni Landscape: Sectors & Top companies

Aerospace & Defense

- Airbus
- Aselsan
- Bombardier Transportation

Automotive

- Ford Motor Company
- Hyundai Motor

Banking

- Abu Dhabi Commercial Bank
- ANZ Banking Group Ltd
- Axis Bank
- Bank of America

Banking

- Barclays
- State Bank Of India

How are Jobs Shared?

Quant Analyst – Prabhudas Lilladher Pvt. Ltd

MUMBAI | MID - LEVEL | FULL TIME

COMPANY OVERVIEW:

Prabhudas Lilladher is one of India's leading research based financial services organisation. Seven decades of powering financial growth In 1944, Mr. Prabhudas Lilladher Sheth registered a stock broking firm with a vision of rising up to become India's leading financial services provider. It has been a long journey since. A journey of success, based on strong adherence to ethics, uncompromising dedication to quality and an attitude of excellence. Imbibed in our corporate culture, these founding principles have guided us to reach the pinnacle that we are at today. Over the years, PL has evolved from a standalone brokerage firm to a one-stop shop for all financial services. Zee Business Market Analyst Awards has honored Ms. Amisha Vora, JMT, Prabhudas Lilladher with the Editor's Choice Award for "Outstanding Contribution to the Equity Markets".

To know more: Click [here](#)

WHAT YOU'LL DO:

- Developing, Testing & integrating technical signals for market timing, market breadth, asset allocation, relative strength, stock selection, fundamental analysis, factor investing.
- Developing & testing ideas based on quant investment portfolio strategies with 1-2-3 m holding periods and trigger-based rebalancing.
- Developing, testing & integrating marketing sentiment indicators, volume-based indicators.
- Developing and testing sector rotation quant strategies based on technical, fundamentals, etc
- Developing quantitative model basis financial market knowledge.
- Collaborate with quant analysts to optimize current models to improve the PnL.
- Contribution to layers involved in back-testing like designing databases, python modules, etc.
- Research and analyze a variety of large data sets to develop and implement signals
- Developing code in python for back-testing, analyzing and live production.

MANDATORY SKILLS REQUIRED:

- Deep quantitative/programming background with a Bachelor's or Master's in Statistics, Engineering, Computer Science, Mathematics, or another highly quantitative field.
- Minimum 2 years of experience required, preferably with a proprietary trading firm.
- Strong knowledge of probability and statistics (e.g., Machine learning, time-series analysis, pattern recognition, NLP).
- Knowledge and experience of the Python language is a must.
- Prior experience in the Equity market is preferred.
- Knowledge and experience of Python language is a must.
- Excellent Knowledge of technical analysis.

REMUNERATION:

As per Industry Standards (To be discussed with selected candidates based on experience/skills and last drawn CTC)

This role is based in Mumbai, only candidates open to relocating or working from Mumbai should apply.

Job Type Segregation

Student Feedback

I was very grateful to you guys, since, what I dreamed a couple of years ago, is becoming true step by step. I could not have done it alone.

- Jonathan, UAE

QI career cell team is very coordinated, good management and takes care of all the things from start to end.

- Ankit Bansal, India

The QI Career Cell team demonstrated professionalism, provided valuable support, had good knowledge of the job market, maintained clear communication, and offered various opportunities. Their assistance was instrumental in helping me secure a job in the company I desired. Grateful for their efforts in my career success.

- Prakhar Gupta, India

While the faculty initially attracted me to the program, I'm now convinced the placement team is the true highlight. It's more than just a portal; it's like having a dedicated family member singularly focused on my career.

- Saptarshi P, India

Corporate Feedback

“ Very proactive and prompt. Was of great help in filtering out the right candidates.” VP - Motilal Oswal

“Proactive team with 100% dedication” HR - Alchemy Capital

“ I have had a great experience working with QuantInsti and good support has been received.” HR - Edelweiss Tokio Life Insurance

“ Quantinsti's corporate career team is very supportive and proactive upon working the requirement of the clients. .”HR Manager - 5Paisa.com
